Infrastructure Proposal

SEBI RA TURNKEY SOLUTION

Contact: 9941817896
Prepared For: Kalpesh M | Co
Date: October 10, 2026

Dear Kalpesh,

Thank you for reaching out regarding your launch as an independent SEBI Research Analyst (RA). Below is our turnkey proposal to build your technological infrastructure, ensuring a seamless, secure, and fully compliant rollout tailored for your initial base of 25-45 active clients.

Phase 1 & 2: Scope of Work

1. Public Website & Regulatory Front-End

- Custom, modern website design built natively on the secure Django framework.
- SEBI header/footer disclosures natively built-in across all pages.
- Dedicated Investor Charter & Grievance Redressal Matrix setup linking to SCORES/SMART ODR.

2. Premium Content Gatekeeping & Security Architecture

- White-labeled client portal deployed on a dedicated subdomain.
- Strict Access Control: Paywalled infrastructure for premium stock/sector reports. Free prospects only access public educational content.
- Anti-Piracy: Disabled browser PDF downloads and dynamic client PAN/Name watermarking on all distributed reports.
- Compliance: Automated backend timestamping and audit trails satisfying SEBI Regulation 25 mandates.

3. Payment Infrastructure & Automation

- Integration of leading payment aggregators (e.g., Razorpay or Cashfree).
- Webhooks/APIs configured so a successful transaction automatically registers, verifies, and updates the client profile status inside the compliance hub.

4. Intellectual Property Protection

- End-to-end Trademark registration workflow (availability searches and classification filing) for your research brand name and logo.

4-Week Implementation Plan

We utilize an agile Django development process. A review module is shared weekly to ensure complete alignment with your vision.

Week 1: Strategy & Architecture
Requirements gathering, mapping exact data flows, establishing brand UI guidelines, and wireframes.

Week 2: Front-End Platform
Public storefront coding and mandatory SEBI disclosure integration.

Week 3: Backend Security
Client gateway built. Watermarking scripts and Reg 25 audit databases established.

Week 4: Payments & Launch
Gateway API linking and comprehensive User Acceptance Testing (UAT) before go-live.

> **Weekly Review Cadence:** Every Friday, we deploy the latest build to a private staging server. To maintain our 4-week delivery schedule, we require that you test, analyze, and provide feedback within 3 days of each release.

Commercial Investment

Project Component	Cost (INR)
1. Website development & deployment	₹40,000
2. Security & client portal	₹60,000
3. Payment integration	₹15,000
4. 1st year AMC support	Free
Total Setup Investment	**₹115,000**

Third-Party Services (Billed at Actuals):

- VPS hosting, Domain registration
- DMR API, E-signing, KYC processing
- Any other features/integrations as per scope (based on discussion)

Terms & Conditions

- **Payment Schedule:** 50% advance payment is required to initiate setup.
- **Review Timeline:** Feedback on weekly progress must be provided within 3 days.

Business Growth Advantage

By utilizing our optimized UI/UX design, your public storefront is engineered to convert passing traffic into paying subscribers. When properly managed with consistent content, this infrastructure is designed to organically capture 25 to 100 highly-qualified leads within your first year.
