Kalphora Equity

Research & Education

Business model, onboarding and technology requirements

Initial plan for discussion with KPreg Tech

Previously operated as INVESTOSPACE. The name has been changed to Kalphora Equity due to a trademark conflict.
SEBI Research Analyst registration: in process.

Business at a glance

Two verticals, one platform, run lean by a solo founder

1. Research (advisory)

- Stock research under SEBI Research Analyst registration
- Swing, breakout and occasional long-term picks
- Premium clients: settled professionals and people nearing retirement with idle capital
- Fundamentals-backed, technically filtered approach

2. Education (courses)

- Basics-to-advanced equity course for trading and investing
- Around 100 hours of structured material
- Free and paid content on the same platform
- Kept clearly separate from the advisory business

50-75
paid clients targeted in Year 1

2-3
recommendations per week

~1 month
to go live after SEBI registration

Founder: CFA Level 1, NISM Research Analyst certified, 10+ years in equity markets, 250+ students coached.

Research offering

One combined package to begin with

The package

- Swing stocks and breakout stocks, plus occasional long-term picks
- About 2-3 recommendations per week, each with entry, target and stop-loss details
- Delivered inside the client login (web and mobile app), with notifications to paid clients
- Every recommendation time-stamped and stored for compliance records

Free users (login, no payment)

- Free educational content and general market learning material
- Common content visible to every registered user

Paid subscribers

- All free content, plus the research package
- Paid content is locked and never visible to free users

Subscription plans

Indicative pricing, to be finalised before launch

Quarterly

₹5,000 - 6,000

- Per quarter, per client
- Full research package
- Good entry point for new clients

Annual

₹20,000 - 25,000

- Per year, per client
- Full research package
- Lower effective cost per quarter

Billing options

- Auto-renew with auto-pay is optional; the client chooses
- Manual renewal also supported
- Reminders before expiry, invoices on every payment
- Fees will be kept within SEBI limits

Client onboarding journey

Designed to follow SEBI Research Analyst compliance requirements

1

Sign up

Free account on the common login portal

2

KYC

Identity and PAN verification

3

Agreement

E-signed client agreement, MITC and disclosures

4

Payment

Quarterly or annual plan; optional auto-pay

5

Access

Paid content unlocked automatically

6

Renewal

Reminders or auto-renew; expiry removes access

Exact steps, documents and wording will be finalised with SEBI compliance requirements before go-live. The platform should keep a complete record of each client's consent, agreement and payment history.

Expected technology requirements

Lean build sized for 50-75 clients in Year 1 (capacity up to 150)

Module	What we need
Website	Public site with the advisory and education businesses clearly separated
Login portal	One login for free and paid users; role-based access; paid content hidden from free users
Mobile app	Android and iOS: login, research feed, push notifications, subscription status
Payments	Gateway with quarterly and annual plans, optional auto-pay (UPI AutoPay / e-mandate), invoices, GST
KYC and e-sign	Integrated KYC and e-signature for the client agreement and disclosures
Admin panel	Publish recommendations, manage subscribers, plans, expiry and renewals
Compliance records	Time-stamped recommendations, consents, agreements and communication logs; retention as per SEBI norms
Security	Encrypted data, secure hosting, backups, data-privacy compliance, audit trail

The course platform (video / lesson hosting) is an additional module; we would like KPreg's view on whether it belongs in the first release.

Proposed approach and timeline

Our starting view; open to KPreg's recommendation

Phase 1: Build

Now until SEBI registration

- Finalise scope and design
- Website, login portal and admin panel
- Payment, KYC and e-sign set up in test mode
- Test onboarding end to end

Phase 2: Go-live

Within ~1 month of registration

- Add registration number and mandatory disclosures
- Switch payments to live
- Onboard first clients
- Mobile app ready at launch or soon after

Phase 3: Grow

After launch

- Course platform and gated lessons
- Reports and analytics on subscribers
- Improvements from client feedback
- Support and maintenance

Points to discuss with KPreg Tech

To agree scope, approach, timeline and commercials

Approach and scope

- Custom build or a customised ready platform?
- What goes into the first release and what follows?
- Mobile app: native, cross-platform or web app first?
- Experience with SEBI-regulated advisory or research platforms

Timeline, commercials and support

- Realistic timeline for each phase
- Pricing structure: one-time build, monthly fees, third-party costs
- Hosting, data security and backups
- Post-launch support, maintenance and change requests
