Message:

Dear Team, I hope this email finds you well. I am an applicant for new registration of individual SEBI Research Analyst (RA). I am planning to launch my independent stock research practice shortly and am looking for a professional, end-to-end tech and compliance partner to handle my initial infrastructure setup. Based on my operational requirements, I would like to request a formal proposal and detailed

commercial quotation for a turnkey solution covering the following components: 1. Public Website & Regulatory Front-End • Design and development of a professional public storefront website (on WordPress, Framer, or a similar flexible platform). • Complete integration of all mandatory SEBI compliance infrastructure (e.g., header/footer disclosures, Investor Charter, and the required Grievance Redressal Matrix linking to SCORES/SMART ODR). 2. Premium Content Gatekeeping & Compliance Architecture • Building/integrating a secure, white-labeled client portal on a dedicated subdomain (e.g., ://mybrand.com). • Setting up robust access control filters: free prospects should only access public educational content, while premium individual stock reports must be securely paywalled. • Activating security protocols to prevent unauthorized sharing (such as disabling browser-level PDF downloads and enabling dynamic client PAN/Name watermarking on reports). • Configuring the backend infrastructure to satisfy SEBI Regulation 25 record-keeping requirements (automated time-stamping and audit trails). 3. Payment Infrastructure Integration • Setting up and linking payment gateway aggregators (e.g., Razorpay or Cashfree). • Configuring webhooks/APIs so that a successful transaction on the frontend automatically registers, verifies, and updates the client profile status inside the compliance hub. 4. Intellectual Property & Brand Protection • Handling the end-to-end Trademark registration process for my research brand name/logo (including availability searches and filing applications under the appropriate classification). Operational Context for Year 1: • Expected Client Base: 25 to 100 active clients in the first phase. • Product Model: Distributing independent, non-personalized individual stock and sector research reports. Could you please share your typical timelines for a project of this nature, along with an all-inclusive pricing breakdown for both the initial setup fees and any recurring software maintenance costs? I am available for a brief introductory discovery call this week if required to finalize the scope. Looking forward to hearing from you. Warm regards, Kalpesh M 9941817896
